When users start asking AI, your brand needs to show up in the answer.

ChatGPT Ads — campaign management & conversion engineering, end to end

WHY NOW

The next ad platform is a conversation

ChatGPT has become the world's largest AI traffic entry point — and OpenAI has opened performance ads inside it. When users ask shopping or service questions, the answer carries sponsored content matched to their intent: **users are looking for an answer, and your product is it**.

> Every new traffic entry point created the first wave of winners — **Meta ten years ago, TikTok five years ago, ChatGPT today.** Beta-era auctions are thin; entry costs are at an all-time low.

Intent-first
Users arrive with a real question — the ad is part of the answer, not an interruption

53 markets
Advertisers across the Americas, Europe, Japan/Korea, India and the Middle East can bill and run

oCPC ready
Conversion-optimized bidding is live — for e-commerce and lead-gen goals alike

THE AD FORMAT

What it looks like, how it works

💬 **User asks**
A real shopping or service intent

→

🤖 **AI answers**
Context and intent precisely matched

→

🎯 **Sponsored slot**
Product image + copy + "Sponsored" label

→

🛒 **Click & land**
Straight to the product page, fully attributed

Two formats: static ads (your own creative card) and dynamic ads (your product feed, matched to each user's intent).

WHAT WE DO

From account setup to attribution — full-stack delivery

01 Account architecture

Advertiser account setup, billing & currency configuration, permissions — built under your name from day one.

02 Campaign management

Campaigns, targeting, budgets and bidding, fully managed — batch scale-up, weekly and monthly reporting.

03 Conversion engineering

Measurement Pixel + Conversions API deployment, conversion events & attribution windows, end-to-end click-to-conversion tracking — the engineering step most agencies skip.

04 Product feed

Feed integration (CSV / hosted URL / SFTP / **native Shopify connect**) and dynamic ad setup — e-commerce clients plug in and go. HubSpot users can build ads and follow leads inside their CRM.

05 Flagship · Paid × GEO

Beyond ads: we also optimize your brand's natural presence in ChatGPT and AI-search answers (GEO) — paid and organic, both slots in the AI answer.

06 Reporting & audit

Regular performance reporting; native change history — every action logged and exportable. Fully transparent delivery.

WHY AIMKT

The fundamental difference from "access resellers"

Dimension	AIMKT · technology-service model	Traditional agency / access-resale model
Account ownership	✓ The account lives under your name — data and billing fully yours	× You advertise "through the agency"; account and data sit with them
Media spend	✓ Paid directly to the platform or a compliant partner channel — every dollar traceable, zero exposure on our side	× Media spend flows through the agency; costs opaque
Onboarding fee	✓ Zero — you set up your own account in 15 minutes; we charge for service only	× Industry practice: ~1% of ad spend charged as an onboarding/access fee
Conversion tracking	✓ Pixel / CAPI deployed on your site — the attribution loop belongs to you	× Usually not offered, or locked inside the agency stack
Switching vendors	✓ Hand over anytime, zero lock-in — a promise we put in the contract	× High switching costs; historical data hard to take with you

AIMKT pricing = **transparent service fees, no hidden percentages stacked on top**: conversion engineering (Pixel / CAPI), product feed and Paid×GEO are part of the service core — not add-ons billed by the hour. We are **channel-neutral orchestrators**: clients who can open their own account go direct (the account is yours); clients who need managed support go through a compliant partner channel (funds paid straight to the channel). Either way, media money never passes through us.

GETTING STARTED

Live in one business day

1. **Account** — Register your ad account, ~15 minutes
2. **Access** — Invite AIMKT as account admin (removable anytime)
3. **Deploy & launch** — Pixel / feed / campaign setup, small test budget
4. **Optimize & report** — Ongoing optimization + periodic reports + full audit trail

Be the answer AI gives.

15-minute setup — start today.
